

# Ansible-vault

# A N S I B L E

Wie nutze ich "ansible-vault" um Klartext Passwörter zu verschlüsseln?

Verschlüsselung eines "Strings" !!

```
ansible-vault encrypt_string '1234567890' --name 'db_password'  
New Vault password:  
Confirm New Vault password:  
db_password: !vault |  
    $ANSIBLE_VAULT;1.1;AES256  
    66383965326665303636336236663433656138373330333039396538353930623362393566636162  
    6634646161623364373937383332626264376535323732640a353364303130313630376366653433  
    65656633386530363939363838656638656463353166393239343764646239643532333931333230  
    3734646439623463350a336330326339353965383632373431623261636533623162366137316465  
    3562  
Encryption successful
```

Entschlüsseln des Ansible Vault

```
echo '$ANSIBLE_VAULT;1.1;AES256  
> 66383965326665303636336236663433656138373330333039396538353930623362393566636162  
> 6634646161623364373937383332626264376535323732640a353364303130313630376366653433  
> 65656633386530363939363838656638656463353166393239343764646239643532333931333230  
> 3734646439623463350a336330326339353965383632373431623261636533623162366137316465  
> 3562' | ansible-vault decrypt
```

---
